## PROJECTS

---

### My Portfolio

[Next js](#) · [Mongodb](#) · [tailwindCSS](#)

portfolio to showcase personal projects and contact information.

### ✦ Traditional Food Ordering Web App

[Next js](#) · [tailwindCSS](#) · [Json](#)

Taste of Cameroon is a full-stack web application dedicated to promoting and delivering authentic Cameroonian traditional dishes. The platform allows users to explore a variety of meals, view detailed descriptions and pricing, and place quick or account-based orders.

### ✦ SmartHome UI – Frontend Interface for Digital House Control

[HTML](#) · [CSS](#) · [JavaScript](#)

SmartHome UI is a modern, fully responsive frontend built for a digital house automation system. It is designed to provide a smooth user experience for homeowners to interact with and control various aspects of their

home environment. The interface includes intuitive sections for: - Lighting Control: Toggle and adjust light

intensity by room. - Temperature Monitoring: Display and adjust thermostat settings. - Security Access: Visual cues for door locks, cameras, and motion alerts. - Dashboard Overview: Clean layout showing real-time status of the house. Built using HTML, CSS (with Flexbox/Grid), and JavaScript, this frontend is optimized for both

desktop and mobile views and designed to easily integrate with backend APIs for full-stack functionality.

### ✦ Static Bootcamp Website with Form Validation

Nov 2023 – Feb 2024

[HTML](#) · [CSS](#) · [JavaScript](#)

CodeCamp is a simple, static front-end website for a tech bootcamp designed to promote training programs,

capture student interest, and collect registrations. While it lacks responsiveness, it delivers core user interface structure and functionality, especially focused on form validation.

### ✦ Portfolio Website. class assignment (Front-end)

[Next js](#) · [TailwindCSS](#) · [CSS](#)

DevFolio is a modern, clean, and fully responsive portfolio website developed using `*Next.js*`. It serves as a digital space for professionals to present their work, skills, services, and achievements in a structured and elegant layout.

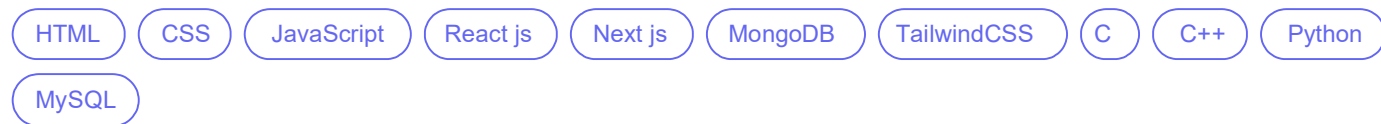

## ✧ Exploratory Data Analysis with Python

### Python

This is a Python-based data analysis project, focused on exploring and visualizing key trends from a structured dataset. The goal is to clean, process, analyze, and communicate insights through visual storytelling using popular Python libraries. \*Tools Used:\* Pandas for data loading, cleaning, and manipulation NumPy for efficient numerical operations Matplotlib for plotting charts (bar, pie, line, histograms)
